

OLD UI DESIGN

Drawbacks of the design

- The text color (light purple) does not provide enough contrast against the white background, making it hard to read.
- The icons and labels blend into the background, reducing accessibility.
- The profile name and email are similar in size, making it difficult to distinguish primary and secondary information.
- Bank account details and mobile numbers are visible, which could pose a security risk.
- No option to hide sensitive information for privacy.
- The spacing between elements is inconsistent, making the layout feel cluttered.
- The design lacks logos that would strengthen their profile

NEW UI DESIGN

Modifications made

- I have enhanced the colour to make it attractive and appealing
- Given the page a subtle blue colour to enhance the visibility of the features
- Added extra information like credit card details, help, transaction history, current balance, language (so it can be used by users all over the world), and a qr scanner to send and receive money easily

- I have added an edit profile option which was not present in the design so that user can change their information at ease
- I have added a share button so that users can share their details to an authenticated person's account
- Finally i have added lock in important information like check balance,bank account number,and credit card details so that these information remain secured and only can be accessed with the help of the respective user's biometric or password
